The Grant Application for creation of a Primary Care Clinic in a Low-Income Community is the basic element in a complete health care system the purpose of which is to empower patients and physicians to make self-sustaining and improved health care services from the bottom up.

We are asking for collateral support for establishment of a cooperative that will be long lasting and not require the expenditure of grant funds but be paid by the patients and medical groups entirely.

The work to create this system has taken ten years and during that time we have tested the care and insuring aspects of it to prove its economy and its positive medical outcomes.

We would very much appreciate your review and consideration of the attached application and supporting documents. Whatever level of support you can offer will be appreciated and will result in a better health care system than is currently available.

Twenty-five years ago, we asked each of the Foundations in Houston to support our work and we received some small grants from Texas Commerce and Compass Banks, but we received forty letters from major Foundations saying they offered us encouragement but their funds were already being used elsewhere. We do hope that those Foundations are in better shape now and can see ways to help us collateralize this project while the actual cost of it is paid by the member patients and physicians. In the light of the very poor showing our country has in both cost and outcomes in medicine this project gives hope of a practical solution.

Sincerely Yours,

Don McCormick
